

1. Miriam
2. C or B... C because of the number of completed programs done
3. Very involved in the building process. She got the claw on without issues. Contribution to code wasn't a whole lot but she was trying and writing code and testing it on the simulator.

1. Chelsea
2. C or B for the same reason as Miriam
3. She was involved in building and planning how to design the bot when we first started working on it and helped put it together. She also helped with the claw assembly. I never seen any code from her to help with the bot. I wasn't there much to talk with her about the code though.

1. Jake
2. B because he was the one who would help with the coding and he even emailed me a formula on how to do perfect turns based on the diameter of your wheel and the distance from wheel to wheel.
3. He was involved in some of the building of the bot and also was the most help when it came to writing code.

1. Coty Embry
2. A (of course Im going to be biased)
3. Also I think I participated in the building of the bot and wrote the code for the tasks to be completed. I think when I was around the other members of my team I was helping them when talking about the code and how to solve the problems they were facing.
